

Did You Know?

Cardiovascular disease is the Nation's leading killer of both men and women and leading cause of permanent disability.

Heart disease doesn't just kill the elderly. It is the leading cause of death for all Americans age 35 and older.

Almost 1 million Americans die of CVD each year.

Stroke is the number one reason for nursing home admissions.

The American Heart Association recommends that prevention for heart attacks should begin at age 20.

An athlete dies every day from sudden cardiac arrest.

Nearly, 4 out of 5 people that have a stroke have no symptoms or warning signs.

Most strokes can be prevented.

**EARLY DETECTION
IS THE BEST PREVENTION!**

*CardioVascular Imaging
of Tampa Bay is now performing
cardiovascular health screenings.*

Our CardioVascular Health Screening Package is an accurate, affordable and non-invasive ultrasound assessment.

These effective painless screening exams can detect problems that can lead to stroke/heart attack and cardiovascular disease before it is too late.

When, these health issues are detected early, there is a much higher preventive success rate. Early detection makes for easier management at a significantly lower cost. Ultrasound is a completely safe and effective form of testing where no radiation is used.

Our ultrasound screening service can be performed at any of the following locations:

- At one of our affiliated locations.
- At your office or place of business.

Even in the convenience and comfort of your own home!

We're just a phone call away, so call us today.
